PROPOSED COOPERATION (Describe in few words):	
Our domain of interest for future cooperation on R&D is the study, validation and demonstration of current and future satellite services and systems for public safety, crisis and security, aeronautical communications, digital divide, education and telemedicine. We have a particular interest in cooperation on applications that could benefit from the combined use of satellite communications, satellite navigation and earth observation.	
Our domain of interest for future cooperation on a commercial level is in relation to the manufacturing of satellites.	
REQUESTED PARTNER (Describe Partners Characteristics):	
We would like to work together with Greek industry, universities and research institutions with expertise either at application level, on satellite communications protocols, technology and products.
