PROPOSED COOPERATION (Describe in few words):	
I am looking in offering as an Application Service provider (ASP) my services and solutions in GREECE.	
AVISEO Systems offers a complete vehicle tracking and Telematics solution. With remote vehicle monitoring, bin sensors, lone worker safety features, and driver login authentication, temperature sensors fleet operators can locate and monitor the location and security status of all their mobile assets - in real time. Find out how you can eliminate manual paperwork, increase billable miles, save on fuel and maintenance costs, improve safety and productivity, and meet government regulations. With automatic driver log information, comprehensive vehicle diagnostics, trailer tracking options and complete telemetry reports, you have all the tools you need to gain new efficiencies on the road and in the office	
We could with a partner develop specific application for Greece or for countries outside Greece	
REQUESTED PARTNER (Describe Partners Characteristics):	
I am looking for a strong partnership with a telco operator in order to develop MtoM services and offer to companies and government a complete solutions. We could package our joint offer and resell it through their sales channels	
Another potential partner is an ASP platform to offer our service to any companies and monitor the system	
Another partner is a system integrator which could add value to our application, develop specific application	

We could partner with a conglomerate of transport companies in order to help their members to better understand the use and benefits of fleet management, satellite navigation ...
