PROPOSED COOPERATION (Describe in few words):	
	Roll out of Crisis Management Operations solutions
	In support of CMO (Crisis Management Operations), rapidly deployable satellite relay begin to appear on the market. Emergesat, a solution developed by Thales Alenia Space, is a telecommunication container that can be easily deployed on a disaster site and supporting the actions of relief actors (Civil Protection Authorities, NGO, international forces, etc.). Emergesat provides both vertical communications (between field and remote decision-making centres, through satcom link) and horizontal communications (between engaged field actors, through wireless technologies such as GSM, VHF, Wifi). We would like to deploy operational networks with relevant end-users and partners.
REQUESTED PARTNER (Describe Partners Characteristics):	
	Satellite Operators
	Civil Protection Authorities
